

ROC curve comparing six classifiers: PIDForest, iForest, RRCF, kNN, PCA, and DTM. The x-axis is FPR (False Positive Rate) and the y-axis is TPR (True Positive Rate). PIDForest (black line with right-pointing triangle markers) shows the best performance, followed by iForest (green line with downward-pointing triangle markers), RRCF (red line with star markers), kNN (yellow line with plus markers), PCA (blue line with circle markers), and DTM (magenta line with cross markers).
